

Vibronic Interactions: Jahn-Teller Effect in Crystals and Molecules

NATO Science Series

A Series presenting the results of scientific meetings supported under the NATO Science Programme.

The Series is published by IOS Press, Amsterdam, and Kluwer Academic Publishers in conjunction with the NATO Scientific Affairs Division

Sub-Series

I. Life and Behavioural Sciences	IOS Press
II. Mathematics, Physics and Chemistry	Kluwer Academic Publishers
III. Computer and Systems Science	IOS Press
IV. Earth and Environmental Sciences	Kluwer Academic Publishers

The NATO Science Series continues the series of books published formerly as the NATO ASI Series.

The NATO Science Programme offers support for collaboration in civil science between scientists of countries of the Euro-Atlantic Partnership Council. The types of scientific meeting generally supported are "Advanced Study Institutes" and "Advanced Research Workshops", and the NATO Science Series collects together the results of these meetings. The meetings are co-organized bij scientists from NATO countries and scientists from NATO's Partner countries – countries of the CIS and Central and Eastern Europe.

Advanced Study Institutes are high-level tutorial courses offering in-depth study of latest advances in a field.

Advanced Research Workshops are expert meetings aimed at critical assessment of a field, and identification of directions for future action.

As a consequence of the restructuring of the NATO Science Programme in 1999, the NATO Science Series was re-organized to the four sub-series noted above. Please consult the following web sites for information on previous volumes published in the Series.

CONFERENCE CHAIRMEN:

Michael D. Kaplan, Simmons College and Boston University

George O. Zimmerman, Boston University

Colin A. Bates, University of Nottingham.

Boris S. Tsukerblat, Moldova Academy of Sciences

TABLE OF CONTENTS

Preface	xi
Professor Edward Teller's Address to the Meeting Participants <i>Teller, E.</i>	1
The Jahn-Teller Effect: A permanent presence in the frontiers of science <i>Englman, R., Yahalom, A.</i>	5
Orbital Ordering and Vibronic States in Manganese Perovskites <i>Zhou, J.-S., Goodenough, J.B.</i>	15
Sum Rules for Jahn-Teller Reduction Factors <i>Bates, C.A., Dunn, J.L., Oliete, P.B., Stedman, G.E.</i>	23
Chemistry of Vibronic Coupling <i>Grochala, W., Hoffmann, R.</i>	31
Field-Induced Crossover and Colossal Magnetoresistance in La _{0.7} Pb _{0.3} MnO ₃ <i>Chu, C.W., Xue, Y.Y., Lorenz, B., Heilman, A.K., Gospodinov, M., Dobreva, S.G.</i>	47
Jahn-Teller Effect and Doping in Manganites <i>Dzero, M., Gor'kov, L., Kresin, V.</i>	57
Degenerate and Nondegenerate States in Jahn-Teller Problems <i>Bersuker, I.B.</i>	73
DFT Calculations of the "Lone-Pair" Effect - A Tool for the Chemist to Predict Molecular Distortions? <i>Reinen, D., Atanasov, M.</i>	83
The {E \otimes E} Vibronic Coupling Case: A Prototypal Product Jahn-Teller System <i>Qiu, Q.C., Ceulemans, A.</i>	97
Exchange Variation of Zero-Field Splitting in Polynuclear Clusters with High-Spin Ground State <i>Belinsky, M.J.</i>	103
Double Exchange in Orbitally Degenerate Mixed Valence Clusters: Magnetic Anisotropy, Vibronic Effects <i>Borras-Almenar, J.J., Clemente-Juan, J.M., Coronado, E., Mirovitskii, V. Yu., Palii, A.V., Tsukerblat, B.S.</i>	111
Singlet Pairing Amongst Degenerate Electronic States:"Softening Bipolarons" <i>Emin, D.</i>	123
Giant Negative Magnetoresistance and Strong Electron-Lattice Coupling in Amorphous Semiconductors with Magnetic Impurities <i>Bratkovsky, A.M.</i>	133
Jahn-Teller Effect in Transition Metal Oxides <i>Louca, D.</i>	141
Magnetoelastic Properties of Jahn-Teller Crystals with Colossal Magnetoresistance <i>Kaplan, M.D., Vekhter, B., Zimmerman, G.O.</i>	153

Vibronic Effects in Spectroscopy of Heme Proteins <i>Stavrov, S.S.</i>	165
Jahn-Teller Clusters in Dielectrics and Cuprates <i>Yablokov, Yu.V.</i>	173
Miscibility in Jahn-Teller Systems <i>Fishman, A.Ya., Ivanov, M.A., Tkachev, N.K.</i>	183
Jahn-Teller Levels of Defects in A ^{IV} B ^{VI} Semiconductors Doped by High Dose Ion Implantation <i>Dashevsky, Z., Chaikovsky, I.</i>	197
The Dynamic Jahn-Teller Effect in High-T _c Superconductors and Water Buckyballs <i>Johnson, K.</i>	205
X-ray Scattering Studies of Correlated Polarons in La _{0.7} Ca _{0.3} MnO ₃ <i>Nelson, C.S., Zimmermann, M. v., Hill, J.P., Gibbs, D., Kiryukhin, V., Koo, T.Y., Cheong, S-W.</i>	209
Dopant Induced Enhancement of the Jahn-Teller Effect in Perovskite Cuprates <i>Polinger, V., Haskel, D., Stern, A.E.</i>	215
EPR Study of Cu ²⁺ Doped (C _n H _{2n+1} NH ₃) ₂ CdCl ₄ Crystals (n=1;3) with Layer Structure <i>Valiente, R., Rodriguez, F., Moreno, M., Lezama, L.</i>	221
Nondegenerate Ground Vibronic States in the Linear T \otimes (e+t ₂) Jahn-Teller Problem <i>Bevilacqua, G., Bersuker, I.B., Martinelli, L.</i>	229
Vibronic Model of Double Triangular Mixed-Valence Clusters with Spin Frustration Effects <i>Fainzilberg, V.E.</i>	235
Jahn-Teller Effect in Corannulene Anion <i>Sato, T., Yamamoto, A., Tanaka, H.</i>	243
Franck-Condon Approximation for Second Order Reduction Factors: Application to Vibronic Reduction in Fullerenes <i>Abou-Ghantous, M., Dunn, J.L., Polinger, V.Z., Bates, C.A.</i>	247
Symmetries of Jahn-Teller States in Charged Fullerenes <i>Wang, C.-L., Yi, Y.-A., Tian, L., Su, Z-B</i>	251
Quantum-Chemical Approach to Zero-Dimensional Anti-Ferroelectrics and Quantum Paraelectrics of the K ₃ H(SO ₄) ₂ Family <i>Dolin, S.P., Levin, A.A., Mikhailova, T.Yu., Solin, M.V.</i>	263
Influence of Jahn-Teller Ions on Spin-Lattice Relaxation in Ferrimagnets <i>Dionne, G.F.</i>	269
Berryonic Matter in the Cuprates <i>Markiewicz, R.S.</i>	273
Microscopic Mechanism of Stripe Pairing Phase Formation <i>Kaplan, M.D., Zimmerman, G.O.</i>	277
	285

Vibronic Coupling in Fullerene Systems: An Analysis of Theoretical and Experimental Studies <i>Hands, I.D., Dunn, J.L., Bates, C.A.</i>	
EPR and x-ray Studies of the Vibronic Effects in $\text{Cs}_2\text{Cu}(\text{ZrF}_6)_{2.6}(\text{H}_2\text{O})$ Crystal <i>Augustyniak-Jabłkow, M.A., Yablokov, Yu.V., Lukaszewicz, K., Pietraszko, P.E., Tomaszewski, P.E., Petraszhen, V.E.</i>	291
The Dynamics of the Jahn-Teller Oxides <i>Chernishov, V.A., Nikiforov, A.E., Popov, S.E., Zaharov, A.Yu.</i>	295
Molecular Mechanisms of Proton Ordering and Formation of Ferroelectric Properties in Systems with 3D, 2D and 0D H-bond Networks <i>Levin, A.A., Dolin, S.P., Kirilova, N.I.</i>	301
The Crucial Role of Jahn-Teller Effect in the Formation of Orbital and Magnetic Structures of Charge Ordered Manganite $\text{R}_{0.5}\text{A}_{0.5}\text{MnO}_3$ <i>Gontchar, L.E., Nikiforov, A.E., Popov, S.E.</i>	307
Ferroelectric Phase Transitions in a Lattice Pseudo-Jahn-Teller Model <i>Clougherty, D.P.</i>	313
Jahn-Teller Polarons in Lightly Doped $\text{La}_{1-x}\text{Sr}_x\text{MnO}_3$ as Studied by EPR <i>Ivanshin, V.A., Eremin, M.V., Krug van Nidda, H.A., Deisenhofer, J., Loidl, A.</i>	317
Cubic Ni^{3+} Centres in $\text{LaSrAl}_{1-x}\text{Ni}_x\text{O}4 \pm \delta$ <i>Ivanova, T.A., Jacyna-Onyszkiewicz, I., Mrozinski, J., Yablokov, Yu.V., Zelentsov, V.V.</i>	323
Physical Mechanism of the Crossover of Ground State Energy Levels in Linear $\text{H} \otimes \text{h}$ Systems <i>Polinger, V., Huang, R., Bates, C.A., Dunn, J.L.</i>	329
Jahn-Teller and A_{1g} Vibrations for Mn^{2+} Doped Fluoroperovskites: Stokes Shift <i>Barriuso, M.T., Moreno, M., Aramburu, J.A.</i>	335
Anharmonic Gap Modes in Alkali Halides <i>Nevedrov, D., Hizhnyakov, V., Sievers, A.J.</i>	343
Free and Spin-Polaron States in High T_c Superconductors <i>Shelkan, A., Hizhnyakov, V., Seibold, G., Sigmund, E.</i>	349
Formation of the Jahn-Teller Glassy State in the Mixed Potassium-Ammonium Tutton Salts <i>Augustyniak-Jabłkow, M.A.</i>	357
Role of Jahn-Teller Coupling in G-Values in C_{60} <i>Anderson, F.G.</i>	363
Fine Interactions and the Jahn-Teller Effect in Luminescence of Fe^{2+} in II-VI Compounds <i>Bevilacqua, G., Martinelli, L., Russo, G., Pastori Parravicini, G., Mualin, O., Vogel, E.E., de Orúa, M.A., Rivera-Iratxet, J.</i>	367

<i>LIST OF CONTRIBUTORS</i>	381

PREFACE

This book is based mostly on the reports presented at the XVth International Jahn-Teller Symposium on Vibronic Interactions in Crystals and Molecules and NATO Advanced Research Workshop Colossal Magnetoresistance and Vibronic Interactions that took place at Boston on August 16-22 of the year 2000.

This is the first time the Symposium took place in the USA where recently the giant splash of the attention to the Jahn-Teller effect occurred. This tremendous interest to the field all over the world is reflected not only in the numerous publications in many American and European Journals, but additionally in the Symposium's participation of the leading scientists from the well known Universities, National Laboratories and industrial companies, which was the largest in the history of the Symposium.

The renaissance of the Jahn-Teller physics is closely related to the three fundamental discoveries in science. The most significant among them is the discovery of high-T_c superconductivity by K.-A. Muller and G. Bednorz, for whom the "Jahn-Teller idea" was the motivation in their search. The result of this search is well known – a wide spectrum of the Jahn-Teller ion based materials with T_c between 24K and 135K were found. The second discovery is the existence of a new polymorph of carbon – the C₆₀. The microscopic analysis of all physical, chemical and biological properties of the buckyballs is based on Jahn-Teller type of interactions. The third is colossal magnetoresistance. This phenomenon was recently rediscovered in the manganese oxide compounds and attracts attention not only for its very rich physics but also for its very promising applications in industry. And here once again the Jahn-Teller ion – ion with orbitally degenerate or pseudo degenerate electronic ground state – plays the major role in the most of the material properties.

Turning again to the particulars of the XVth Jahn-Teller Symposium, we would like to comment on one of its distinguishing features. For the first time, the father of the Jahn-Teller effect, Prof. Edward Teller participated in the Symposium. While his illness restricted him from coming to Boston and delivering his talk at the time of the Symposium, we were able to meet him in advance and to record his greeting and a presentation to the participants. His brief historical remarks, opinions on the role of the Jahn-Teller effect in Materials Science and high-T_c superconductivity, and some of his novel ideas will be of interest to the readers.

It is our hope that the book will be helpful to the scientists interested in colossal magnetoresistance, high-T_c superconductivity, buckyballs, and new magnetics with orbital degeneracy. Quite often, the new enthusiasm in one of the science fields is accompanied by "rediscoveries". This book should save some work time for those interested in the electron-phonon interaction at orbital degeneracy – the Jahn-Teller effect, - while, of course, it does not contain ready solutions to many of the problems.

One of the goals of the XVth Jahn-Teller Symposium was to bring together scientists from different fields – physics, chemistry, biology--, who are working on Jahn-Teller problems, for developing a “common language and common ideological platforms”. That is why in the Program of the Symposium the different subject presentations are next to each other.

The structure of the book corresponds in this sense to the structure of the Symposium. There are “short” (4-5 pages) and “long” (8-16 pages, related to the invited talks) manuscripts on different subjects. The reader will find in the book, for example, the results of the experimental studies and reviews on colossal magnetoresistance (J. Goodenough and Zhoo, D. Looca, C. Nelson), chemical point of view on high-Tc superconductivity (W. Grochala and R. Hoffmann) and materials science of perovskites (M. Atanasov and D. Reinen), vibronic interactions in biological systems (M. Belinski, S. Stavrov) and molecules (C. Bates, J. Dunn, M. Abou-Gantous), theoretical studies of colossal magnetoresistance (L. Gor'kov, V. Kresin, and M. Dzero) and structural phase transitions (M. Kaplan, B. Vekhter, G. Zimmerman), high-Tc superconductivity (A. Bratkovsky, V. Polinger, D. Haskel, A. Stern), fundamental questions of the Jahn-Teller effect (I. Bersuker, A. Ceulemans, Q. Qiu). However, all the manuscripts on the different subjects have a commonality, the Jahn-Teller, or vibronic, approach. This should be of interest to the reader from any of these fields.

Of course, it is difficult to convey the atmosphere of excitement and creative energy that pervaded the Symposium. As the participants are acknowledging, the Symposium and the NATO ARW were most successful. This was made possible by the support of the meeting's sponsors. The financial support of NATO's Science Division was crucial for the success of the Symposium. The organizational and financial help of the hosts of the meeting Boston University and Simmons College can not be overestimated. The support of MKS, Elsevier Publisher, and Mitre is gratefully acknowledged.

We would like to thank all authors for their contributions and time it took them for preparing the manuscripts.

Michael Kaplan,
George Zimmerman.
